

# Installation Instructions

For part #127052 Street Glide / Road King LP6 Headlight Mounting Bracket

Kit Contains:

- 1- LP6 Adapter Mounting Bracket 127052
- 1- 6/32x5/8" long Machine Screw

Thanks for purchasing our Street Glide / Road King LP6 Headlight Bracket. This kit consists of 2 basic parts.

1. The main bracket which utilizes all the factory holes and screws.
2. A simple 6/32 screw that attaches your factory headlight bezel back on.

1. First, Make sure you have the bracket as shown below, the 6/32 screw, approved Cali Raised Moto Wire Harness and your factory trim ring which will be re applied after light is installed.
2. Remove your factory light trim ring. Remove your factory light and bracket saving the screws that attached "Outer" light ring to your fairing.
3. Unplug your factory light and set it aside.
4. Open your LP6 Light and locate the Baja Designs Factory hardware bag.
5. Using the 1/4x20 bolts supplied, attach your LP6 light to your new Bracket #127052.
6. Plug in the Cali Raised Moto LP6 plug into the back of light and set the entire light assemble inside your fairing.
7. At this point check for light level. Ideal setting is 87.5 Degrees when bike is level on ground (Not on stand)
- 8 You can install screws and check for light level first before fully tightening LP6. Once level is achieved, Pull the Assembly back out and fully tighten the 4 - bolts using 7/16 wrench.
9. Now you are ready to install the trim ring. Put the top spring clip in the top of the bracket and then lower trim ring to align with the lower tab. Using the 6-32 screw provided, install this and snug it up. DO NOT OVER TIGHTEN screw.. If you do, this will cause trim ring to crush and pull out.
